SUMMARY

As a passionate Flutter Developer, I aim to begin my professional journey in software development by continuously enhancing my technical skills and contributing to innovative digital solutions. I am highly motivated to grow as a skilled Software Developer, with a strong interest in Robotics, IoT, and emerging technologies. I stay committed to learning and keeping myself updated with the latest advancements in technology to build impactful and future-ready applications.

Work Experience

Jr. Flutter Developer

SparkTech Agency | Nov 2025 – Present

- Developing & deploying cross-platform apps using Flutter
- Building responsive UIs with Clean Architecture
- Integrating REST APIs & real-time features (Socket.io)
- Implementing FCM push notifications
- Publishing and maintaining apps on Play Store & App Store

PROJECTS:

Gathering – Event Discovery & Social App (Client Project)

Built a modern, scalable app to discover, join, and host events effortlessly. Features include event discovery, real-time participation, user authentication, social interaction, and dynamic event feeds with smart filtering.

Technologies: Flutter, Provider, REST API, JSON, WebSocket, Google Maps, Agora RTC, Git

Photopia – Photography & Media Marketplace Platform (Client Project)

A dual-sided marketplace app built with Flutter connecting photographers and clients. Features include a booking system, real-time chat using Socket.io, secure payments via Stripe, and push notifications using Firebase Cloud Messaging (FCM). Backend communication is handled through REST APIs, with state management using Provider. Includes a professional dashboard for managing orders, availability, and portfolios. Developed using Clean Architecture with responsive UI and location-based discovery. Technologies: Flutter, GetX, REST API, JSON

ClipFrame – Content Creation & Social Media App (Client Project)

Built a feature-rich content creation and social media application that empowers users to create, edit, schedule, and share multimedia content. Features include video editing with FFmpeg, AI-powered caption generation, story creation, post scheduling, premium subscription plans, user onboarding, photo/video editing tools, and social authentication (Facebook login). Integrated with a real backend API for content management, user authentication, email verification, and password recovery.

Technologies: Flutter, GetX, REST API, JSON, FFmpeg, Camera API, SharedPreferences, Facebook Auth, Git

Education

Diploma in Computer Science & Technology

Feni Computer Institute, Bangladesh

Final Semester Completed (Result Pending)

Skills

Programming: Dart, C, Python

Frameworks & Tools: Flutter SDK, Android Studio, VS Code, Git, GitHub, Postman

Backend & Integration: REST API Integration, HTTP Requests, Authentication, Data Handling

State Management: Provider, GetX
